                                                                                                                                                                                    The present sequence represents the heliomycin peptide. Heliomycin is a polycysteine peptide with antifungal and antibacterial activity, isolated from the lepidopteron Heliothis virescens. Heliomycin peptides contain the sequence given in AAYS478. The heliomycin peptides contain the sequence given in AAYS478. The heliomycin peptides are used as pharmaceuticals for treating or preventing fungal infections in humans and animals. They may also be used as antifungal agents for plant protection. Nucleic acid encoding the heliomycin peptides is used to generate transgenic plants that are resistant to some fungil and bacteria (specifically Cercospora beticola, Cladosporium herbarum, Fesatium cullmorum, F. oxysporum and Phytophthora cinnamonii, and for recombinant production of the peptides.

                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to peptide derivatives of heliomicine with annifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 AspLysLeuileGlySerCysValTrpGlyAlaValAsnTyrThrSerAspCysAsnGly

The present sequence represents a fusion peptide of 5 amino acids derived from the Mar alphal factor (MF-alphal) and heliomycin. The attachment of the MF-alphal sequence to the N-terminal aids secretion of the heliomycin peptide. Heliomycin is a polycysteine peptide with antifungal and antibacterial accivity, isolated from the lepidopteron Heliothis virescens. Heliomycin peptides contain the sequence given in AXY54378. The heliomycin peptides are used as pharmaceuticals for treating or preventing fungal infections in humans and animals. They may also be used as antifungal agents for plant protection. Nucleic acid encoding the heliomycin peptides is used to generate transgenic plants that are resistant to some fungi and bacteria (specifically Cercospora beticola, Cladosporium herbarum, Fusarium culmorum, F. oxysporum and Phytophthora cinnamoni), and for recombinant production.

The attachment of the PR-lalpha sequence to the N-terminal ands secretion of the heliomycin peptide. Heliomycin is a polycysteine peptide with annitungal and annibaccerial activity, isolated from the lepidopteron Heliomycin purescens. Heliomycin peptides contain the sequence given in AAY5437B. The heliomycin peptides are used as pharmaceuticals for treating or preventing fungal infections in humans and animals. They may also be used as antifungal agents for plant protection. Nucleic acid encoding the heliomycin peptides is used to generate transgenic plants that are resistant to some fungi and bacteria (specifically cercospora beticola, Cladosporum herbarum, Pusarium culmorum, F. oxysporum and Phytophthora cinnamoni; and for recombinant production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 GATAAGCTTATCGGTTCCTGCGTGTGGGGTGCTGTAACTACACTTCCGATTGCAACGGT 60

                                                                                                                                                                                                                                                                                                    The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 GATAAGCTTATCGGTTCCTGCGTGTGGGTGCTGTGAACTACACTTCCGATTGCAACGGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Db
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GATAAGCTTATCGGTTCCTGCGTGTGGGGTGCTGTGAACTACACTTCCGATTGCAACGGT 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide derivatives of heliomicine, useful as antibacterial and antifungal agents in human or veterinary medicine and agriculture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antifungal; antibacterial; fungicide; heliomicine; human medicine; veterinary medicine; plant protection; bacterial infection;

                                                                                                                                                                                                    The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and vecerinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21 GluCys.ysArgArgGlyTyrLysGlyGlyHisCysGlySerPheAlaAsnValAsnCys 40

                                              The present invention relates to peptide derivatives of heliomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one

The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21 GluCysLysArgargGiyTyrLysGlyGlyHisCysGlySerPheAlaAsnValAsnCys 40
antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       AsplysteulledlySerCysValTrpGlyAlaValAsnTyrThrSerAspCysAsnGly

The present invention relates to peptide derivatives of hellomicine with antifungal and/or antibacterial activity. The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An antifungal and/or antibacterial composition containing at least one peptide is also claimed.

The present sequence is one such peptide. The peptides are useful in human and veterinary medicine and in plant protection, for control of bacterial and fungal infections. An artifungal and/or antibacterial composition containing at least one peptide is also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21 GluCysLysArgArgGlyTyrLysGlyGlyHisCysGlySerPhelleAsnValAsnCys 40

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 25. Application US/08682485A
Patent No. 5763568
GENERAL INFORMATION:
APPLICANT: ATKINSON, RONALD K
APPLICANT: TYLER, MARGARET I
APPLICANT: TYLER, EDWARD J
TITLE OF INVENTION: Insecticidal Toxins Derived From
TITLE OF INVENTION: Funnel Web (Atrax or Hadronyche Spiders)
NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             49 CGGAAGTGTAGTTCACAGCACCCCACACGCAGGAACCGA 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (S-09-673-274B-2 (1-169) x US-09-252-991A-32270 (1-149)

Patent No. 6465719

GENERAL INFORMATION:
APPLICANT: DeRose, Richard
APPLICANT: Freyssinet, Georges
APPLICANT: Hoffman, Unles
TITLE OF INVENTION: Chimeric Gene Encoding Drosomycin,
TITLE OF INVENTION: Transgenic Plants
FILE REFERENCE: A32889-PCT-USA-A
FILE REFERENCE: PCT-USA-A
CURRENT APPLICATION NUMBER: BCT/FR98/01462
PRIOR FILING DATE: 1998-07-08
PRIOR FILING DATE: 1998-07-08
PRIOR FILING DATE: 1999-07-01
PRIOR FILING DATE: 1997-07-11
PRIOR FILING DATE: 1997-07-24
NUMBER OF SEQ ID NOS: 15
SEQ ID NO 4
LENGTH: 44

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 2, Application US/09480251

Patent No. 6465729

GENERAL INFORMATION:
APPLICANT: Defecse, Richard
APPLICANT: Hoffman, Jules
TITLE OF INVENTION: Containing It And Production Of Disease-Resistant
TITLE OF INVENTION: Vector Containing It And Production Of Disease-Resistant
TITLE OF INVENTION: Vector Containing It And Production Of Disease-Resistant
TITLE OF INVENTION: Vector Containing It And Production Of Disease-Resistant
TITLE OF INVENTION: Vector Containing It And Production Of Disease-Resistant
TITLE OF INVENTION: Vector Containing It And Production Of Disease-Resistant
TITLE OF INVENTION: Vector Containing It And Production Of Disease-Resistant
TITLE OF INVENTION: Transpagent Plants
FILE REFERENCE: 2030-01-11
PRIOR APPLICATION NUMBER: BC30-01-11

N.Alternate names: cysteine-rich peptide
C.Species: Drosophila melanogaster
C.Saceies: Drosophila melanogaster
C.Data-1995 #sequence_revision C5-Apr-1995 #text_change 21-Jul-2000
C.Accession: A55824, S38575
